

Objectives

This section lists the objectives for the period including their status. Performance against these objectives should be reviewed. The suggested objectives for the next period are also listed and these should be agreed during the PDR meeting.

Current Objectives

These are objectives that are expected to be worked on during the current review period, from 01 Jan 2008 to 31 Dec 2008

RMU-556 Test Fixture Construction

To design and build a test fixture similar to the KDA test fixture, to facilitate easier and faster troubleshooting of the RMU-556 boards with less risk of damage to boards and intermittents associated with the necessity of installing many jumpers and extension cables. The RMU test fixture will, ideally, permit plugging all boards directly into the fixture without using extension cables, while allowing access to both sides of each board for troubleshooting.

AT-434A Reliability Issues Resolution

To continue researching and contributing to the elimination of AT-434A field failures caused by water and moisture, in order to maintain and enhance our fine reputation in the eyes of our customers and prevent the eventuality of lost sales and diminished customer confidence in our products.

Start Date:	01 January 2008
Target Date:	Ongoing
Status:	In progress
Comments: (Individual)	Thanks John, for placing enough faith in me to allow me to pursue this project with a minimum of supervision, and also for immediately implementing my findings upon seeing the results. For instance, you asked me to start repairing warranty units we normally replace just a few hours after learning that they can indeed be repaired. This gives me a great sense of accomplishment and makes it evident that you expect the best from us.
